

Sameer Kumar

About

A systems-focused architect and engineering leader who pairs deep platform engineering with applied AI and agentic workflows — building in-house ML models, AI-assisted migrations, and clean, maintainable systems — while owning the hardest parts along the way.

Highlights

- Designed platform architectures spanning AI systems, healthcare integrations, enterprise SaaS platforms, and large-scale modernization initiatives.
- 8+ years of experience designing, modernizing, and scaling enterprise software platforms, with a growing focus on AI/LLM-driven systems.
- Led modernization programs spanning monolith decomposition, cloud adoption, and architectural transformation.
- RubyConf India speaker and technical author with 100K+ reads on engineering and consulting topics.

Experience

Zensar Technologies , Senior Engineering Lead	Pune, India (Remote) July 2026 – present
Sedin Technologies , Senior Technical Consultant	Bengaluru, India May 2021 – July 2026
Mindfire Solutions , Software Engineer	Bhubaneswar, India Apr 2019 – May 2021

Skills

Languages: Dart, Elixir, Java, JavaScript, Python, TypeScript, Ruby

Databases: Firebase/Firestore, MongoDB, MySQL, Oracle, PostgreSQL, SQLite

Frameworks: Angular, Django, Express, FastAPI, Flask, Flutter, NestJS, React/Next.js, Ruby on Rails, Vue

UI & Design: Bootstrap, Figma, PrimeFaces, Material, Mantine, Radix, SCSS, Tailwind

DevOps: AWS, Docker, GCP, GitHub, GitLab, Jira/Bitbucket

AI/LLM: Claude, GPT, Gemini, Agentic Workflows, MCP, RAG/Vector Search, Knowledge Graphs, Prompt & Context Engineering, AI Evaluation, Sentiment Analysis

Projects

AICrete (US)

- Integrated in-house AI models for aggregate classification and structural property estimation from concrete sample images.
- Built the entire React/Remix frontend using agentic coding workflows with Claude.
- Used AI-driven translation workflows and custom Claude skills to migrate the platform to French with i18n.
- Used AI-assisted analysis to decompose the Django monolith into a REST API architecture, enabling incremental frontend migration.
- Accelerated test coverage development using AI-assisted workflows, reducing manual engineering effort while improving release confidence.
- Optimized heavy analytics and table queries for up to 10x speed and memory improvement, using EXPLAIN ANALYZE-driven query analysis.

Vidura (IN)

- Built an org-wide chat utility that ingested various types of documents into vector databases with metadata indexes for retrieval.
- Answered natural-language queries against an ever-growing organizational knowledge base using RAG.
- Rendered responses dynamically as text, charts, or tables depending on the query.
- Supported read-only natural-language queries directly against the PostgreSQL database.
- Enforced access-level security to protect sensitive data across users with different permission tiers.
- Generalized the platform into a domain-aware system that could integrate with any knowledge base.

Subscribili (IN)

- Used AI-assisted tooling to migrate a large legacy JavaScript codebase to a modern TypeScript structure.
- Converted Figma designs directly to code using MCP-based workflows.
- Built dental subscription-management dashboards for patients and providers, unified in a composable, plug-and-play monorepo.
- Designed a bespoke component system using Radix and Tailwind.
- Implemented caching strategies to enhance UX and contributed to the platform's microservice migration.

KCH (UAE)

- Used AI-assisted code analysis to reverse-engineer business logic from a 20-year-old Windows-based EHR system to an on-prem private cloud.
- Re-architected the application from HL7 to FHIR protocol and setup multi environment deployments.
- Delivered Oracle Millennium FHIR integration for custom OAuth, patient data, and appointment management.

Collectively - theAmplify (US)

- Built an NLP utility for sentiment analysis, user clustering, and topic weighting using Google AutoML and Ernie RPC-based servers.
- Developed ML-driven services for creator analysis — anomaly detection, demographics analysis, and content sanity checks — in Ruby and Python.
- Built data-visualization dashboards using Google Data Studio and Looker to surface social media and influencer performance in real time.
- Upgraded a Rails v4 application to a modern Webpacker-based Rails 6 setup and integrated SSR React for complex interactivity.

SITA - DigiHub (EU)

- Led the front-end team building a multinational airline and airport data-aggregation platform.
- Migrated the platform to Angular v18 with a microservices approach, sourcing data from Microsoft, ServiceNow, and Salesforce.
- Integrated Azure B2C auth, storage, Power BI, and SharePoint.
- Led a brand-level redesign, implemented as an Angular component library using PrimeNG and Tailwind.

GAEA - Exto (IN)

- Built an adaptive scheduling algorithm for activities and resources in the project management system.
- Modernized a legacy Express codebase and implemented a policy-based authorization layer for access control and user impersonation.
- Developed the v2 backend with MongoDB and NestJS, retrofitting Jest and Playwright test coverage.
- Implemented the new scheduling UI with Angular, Bryntum Gantt, and PrimeNG.

Education

B.Tech **Silicon University**, Computer Science and Engineering Bhubaneswar, India
2015 – 2019

Community

Speaker, RubyConf India 2022 & 2025 [DSLs in Ruby](#) [?]

Technical Blog, 100K+ reads on engineering & consulting topics [Medium Articles](#) [?]
